Languages: English, French

Summary of qualifications

- Senior full-stack engineer whose work spans blockchain applications and developer tooling at OpenZeppelin, cloud-based microservices, and custom web applications.
- Build the tools behind products as well as the products themselves: developer CLIs and IDE extensions, reusable scaffolding with modular capabilities and lifecycle management, and AI-assisted workflows with people in the loop.
- Connect technical decisions with how people and organisations work, from business needs and processes to product direction, software architecture, UX design, and implementation.
- Bring experience as a product co-founder, technical lead, developer mentor and instructor, alongside analytics and marketing experience and a master's degree in sociology.

Technical Skills

- **Languages:** TypeScript, JavaScript, Move, Ruby, Solidity, Rust (learning)
- **Programming Practices:** Functional programming, automated testing, modular design
- **Backend:** Node.js, Koa, Express, Rails
- **Frontend:** React, Next.js, Svelte
- **Blockchain:** Sui, Ethereum, smart contracts
- **Cloud & Infrastructure:** AWS (Lambda, DynamoDB, SNS, SQS, EventBridge), Cloudflare (Pages, Workers)
- **DevOps:** Docker, Terraform, CI/CD pipelines
- **Architecture:** Microservices, event-driven architecture
- **Tools:** Git, CLI tooling, IDE extensions
- **AI & Automation:** Codex, custom AI skills, AI-assisted workflows, custom tooling
- **Methodologies:** Scrum, Kanban, Agile

Employment History

Senior Full-Stack Engineer & Technology Consultant - Egeria Systems | Montreal, Canada **2026-Present**

- Work with individuals and organisations to understand their needs and how they operate, turning goals into websites, web applications, analytics tracking, internal tools, and simpler digital workflows.
- Lead project discovery and technical planning, from defining requirements and evaluating technologies to designing architectures and implementation plans tailored to organisational systems and processes.
- Build a reusable Next.js and TypeScript scaffolding system that generates foundations for web projects and manages modular capabilities over their lifecycle, including Cloudflare, authentication, multilingual content, analytics, and other integrations.
- Create internal tools and AI-assisted workflows for client intake, technical analysis, technology recommendations, branded reports, and interactive website mockup reviews.
- Design the look, feel, and functionality of each website, drawing on the client's personality, values, and business goals to shape its visual direction and user experience.

Senior Full-Stack Blockchain Developer - OpenZeppelin | Remote **2022-May 2026**

- Built full-stack applications on Sui with Move smart contracts, TypeScript tooling, and React interfaces, including trading and account-management features.
- Developed tools for deploying, configuring, interacting with, and testing Sui Move contracts, making development workflows more repeatable.
- Extended OpenZeppelin Contracts Wizard with Stellar/Soroban contract-generation options, metadata support, and Rust compilation tests.
- Developed OpenZeppelin Defender features across TypeScript clients, AWS-based microservices, and a Svelte frontend.
- Maintained CI/CD and AWS deployment workflows while contributing to Scrum, Kanban, and AI-assisted development practices.

Senior Software Developer - Aldo | Montreal, Canada **2021**

- Delivered end-to-end order management services in a microservices and event-driven architecture, owning implementation from design through deployment and supporting reliable production operations.
- Built tested TypeScript services with a functional approach, limiting sides-effects and improving maintainability.
- Deployed and operated AWS serverless systems using Lambda, DynamoDB, SNS, SQS, and EventBridge to support scalable, event-driven order workflows.
- Built internal CLI and IDE tooling that reduced development friction and made team workflows more consistent.
- Built and optimized CI/CD pipelines that improved release quality, consistency and faster delivery.
- Improved team delivery by strengthening onboarding, training new developers, and tightening day-to-day engineering workflows facilitating Scrum ceremonies.

Full-Stack Developer and Scrum Master - Spockee | Montreal, Canada **2021**

- Built REST APIs and real-time WebSocket services with JavaScript, TypeScript, Koa, and Express for a multi-service platform.
- Developed an internal CLI to simplify developer setup, including dependency checks, repository configuration, and application installation.
- Managed Docker environments, AWS infrastructure with Terraform, and CI/CD pipelines while helping the team coordinate work through Scrum.

Lead Full-Stack Developer and DevOps - Tooly | Montreal, Canada **2020**

- Led architecture and technical decisions for an early-stage product, balancing business needs with a foundation that could evolve.
- Built full-stack features with TypeScript, Node.js (Koa), and React, alongside Docker-based development environments.
- Worked across product and engineering during Next AI's tech-track incubation program, connecting business needs with implementation decisions.

Co-founder and CTO - VizzMD | Centech's Acceleration Program | Montreal, Canada **2019**

- Co-founded VizzMD and helped shape its early product and technology direction during Centech's acceleration program.
- Built the first MVP with Rails and React, turning an early product concept into a working application.
- Set up CRM processes and worked on validating the business concept and product-market fit.

Full-Stack Development Instructor - Le Wagon | Montreal, Canada **2019**

- Helped students move from core programming concepts to building their own full-stack web projects.
- Guided students through debugging, technical challenges, and how the parts of a web application fit together.

Web Analyst & Data Engineer - LCI Education | Montreal, Canada **2018**

- Built automated data pipelines and reporting workflows to make marketing performance easier to track and understand.
- Worked across data engineering and paid campaign management on Google Ads, Bing, YouTube, Facebook, and LinkedIn, connecting measurement with decisions.

Education

Professional Scrum with Kanban I Certification **2022**

Scrum.org

Certified Ethereum Developer I Certification **2022**

Blockchain-Council.org

Professional Scrum Master I Certification **2021**

Scrum.org

Product Manager Program | Certification **2020**

Linky Product Bootcamp

Full Stack Developer Program | Certification **2019**

Le Wagon Bootcamp

Master's Degree in Sociology - Magna Cum Laude **2017**

University of Quebec at Montreal (UQAM)

Research thesis: Comparison of the state of discriminations in France and Quebec and how the model of community associations favors integration by socialization
